

What is DirectoryLoader?

DirectoryLoader is used to load many files from a folder.

It reads all files and converts them into Document objects.

Useful when you have many PDFs or text files.

Why use DirectoryLoader?

Manually loading files is slow.

DirectoryLoader loads all files at once.

It saves time and effort.

Basic Example

```
from langchain_community.document_loaders import DirectoryLoader, PyPDFLoader

loader = DirectoryLoader('pdfs', glob='*.pdf', loader_cls=PyPDFLoader)

docs = loader.load()
```

What does it return?

It returns a list of Document objects.

Each Document has text and metadata.

You can use them for RAG or search.

Summary

DirectoryLoader loads all files from a folder.

It converts them into Document format for AI.
